

PULKIT GAUTAM

ROGUEX / CYBERSECURITY STUDENT & BUILDER

Cybersecurity • Web Security • Networking • CTFs • Reverse Engineering • OSINT

hello@roguex.dev • github.com/roguexphantom • roguex.is-not-a.dev

PROFILE

I'm a cybersecurity student who likes building things, experimenting with technology, figuring out how things work, and learning how to break into systems. My approach is hands-on: learn the fundamentals, build projects, test them, and keep improving.

FOCUS AREAS

- **Web Security** — HTTP, APIs, common web vulnerabilities, security testing
- **Networking** — TCP/IP fundamentals, DNS, DHCP, traffic analysis, Wireshark
- **Offensive Security** — Reconnaissance, vulnerability discovery, CTF methodology
- **Reverse Engineering** — Learning program behavior, analysis, and debugging
- **OSINT** — Open-source research, information gathering, and investigation

SELECTED PROJECTS / BUILDS

ShadowMap

Attack-surface reconnaissance represented as an interactive graph.

Cerberus

Anomaly-detecting WAF reverse proxy focused on web traffic analysis.

KeySeer

Entropy-aware secret scanner designed for Git pre-commit checks.

CURRENT LEARNING

- Cisco Networking Academy — Junior Cybersecurity Analyst learning path
- picoCTF — hands-on cybersecurity challenges
- pwn.college — practical security and systems training
- Web Security Academy — web security practice and research

TECHNICAL STACK

Python • JavaScript • React • Git/GitHub • Linux • Nmap • Wireshark • HTTP/DNS/DHCP • Web Security • Reconnaissance

GOAL

Become a cybersecurity professional who can help prevent attacks, protect privacy and data, and build systems that people can trust.
